Summary

Software Engineer specializing in AI/ML and full-stack development. Proficient in architecting Deep Learning models and building integrated web and mobile applications using Django, Flask, and Flutter. Strong foundation in Python, Java, and C++, with a focus on deploying scalable, data-driven solutions.

Skills

Languages: Python (Proficient), Java, C++, SQL, Dart

Frameworks & Libraries: TensorFlow, Keras, Flask, Django, Flutter, OpenCV, NumPy, Pandas, Spring boot

Data Visualization: Matplotlib, Seaborn

Tools & Platforms: Firebase, Git/GitHub, SQLite, Streamlit, VS Code

Core Competencies: Machine Learning, Deep Learning, Mobile App Development, REST APIs

Experience

Technical Mentor & Programming Volunteer

Jan 2024

University Polytechnic, AMU

Aligarh, India

- Mentored 40+ students in **Python and Data Structures**, conducting weekly hands-on sessions and logic-building workshops to improve technical proficiency.
- Designed a custom programming curriculum and coding challenges, resulting in measurable improvements in students' lab assessment scores.
- Organized mini-hackathons and provided debugging support for student projects, fostering a collaborative environment focused on **OOP** and algorithmic thinking.

Projects

NeuroSpark – AI Brain MRI Diagnosis | Python, Django, TensorFlow, Keras

Sep 2023 – Dec 2023

- Architected a Deep Learning model using **TensorFlow** to classify brain MRI scans across 13 distinct categories (12 diseases + normal), achieving **99.01% validation accuracy**.
- Developed a full-stack web application using **Django**, enabling users to upload medical imagery and receive near-instant diagnostic predictions.
- Engineered a **dual-mode scanning feature** allowing users to toggle between Targeted Disease Screening and Comprehensive 13-Class Analysis.
- Processed and trained the model on high-quality MRI datasets, focusing on complex conditions including Glioma, Stroke, and multiple stages of Dementia.

AI Health Friend – Smart Health Companion | Java, Python, Firebase, ML

Jan 2023 – Mar 2023

- Developed a cross-platform diagnostic app utilizing a Machine Learning model to predict potential diseases based on user symptoms with **95% accuracy**.
- Engineered a **Python Flask API** for real-time model inference and seamless communication between the Android front-end and the ML backend.
- **Led a team of 4** to manage the development lifecycle, including the integration of Firebase for secure authentication and persistent health record tracking.
- Implemented an automated **Guardian Alert System** using SMTP services to trigger real-time email notifications to emergency contacts upon high-risk predictions.

Awards & Certifications

- **Data Science Using Python – Swayam (2025):** Learned data cleaning, exploratory visualization, and building predictive models using the Python data stack (Pandas, Matplotlib, Scikit-learn).

Education

Bachelor of Technology in Computer Science & Engineering

2025 – 2028 (Expected)

Vivekananda College of Technology and Management

Aligarh, India

Diploma in Computer Engineering

2021 – 2024

University Polytechnic, AMU

Aligarh, India | **CGPA: 9.9 / 10**
